

Behavioral Health INTEGRATION (BHI)

Care Coordination for Value-Based Care Success

ChronicCare combines a digital behavioral health assessment with an advanced analytics engine to rapidly identify patient behavioral health issues, assign risk scores, and generate alerts which are delivered in real-time at the point of care.

- Enhance care plan development and review with accurate clinical content
- Utilize clinically validated assessments to identify behavioral health conditions, including PHQ-9 (Depression), GAD-7 (Anxiety), CAGE (Alcohol), DAST-10 (Substance Abuse), and MDQ (Mood Disorders)
- Analyze patient risk factors and generate clinical recommendations
